- Test, Measurement & Monitoring: DEKTEC, SENCORE, SED (division of CALIAN) with addition of own solutions.
- FPGA video technologies (ADEAS, NEXTERA, ...)
- Development of its own range of products: VICO converters integrating into PIX TICO and JPEG-XS codec, Multiviewer and Monitoring software, VillageFlow video workflow platform;
- Software development for strategic partners and for custom projects;
- System integrations;
- Broadcast consulting and technical services;

- Seminars

VILLAGE ISLAND disposes of a wide customer base in Asia, and more than a thousand of system deployed.

Typical VILLAGE ISLAND customers are broadcast operators and TV/Radio stations, system integrators, broadcast equipment and STB/TV manufactures.

Based on our solutions, our customers can easily build video generation devices, analysis devices, record & play devices, modulators, gateways, multiplexing and encoding system to meet all their broadcasting needs.

It is an international workplace with a representative director of Belgian nationality and several employees from overseas.

As digital broadcasting technology is globalizing, we have our own unique technology addressing the world.

With our dedicated team and network of qualified professionals we can offer a full range of hardware and software solutions for all your broadcast applications. Our solutions are highly integrated, flexible, and known as most cost-performing products on the market.

At Village Island, software development and hardware integration are key added values for our customers and partners.
